

Product Characterization Sheet

051-231

Mouse Hepatocytes, Catalog Number 82012

Classification

| | |
|--------------------------|------------|
| Plateability | Suspension |
| Number of days plateable | NA |
| Confluency | NA |
| P450 Inducibility | NA |
| Number of donors | 8 |

Donor Demographics

| | |
|---------------------|------------|
| Gender | Male |
| Strain | CD-1 |
| Age | 8-12 weeks |
| Weight | 30-35 g |
| Infectious diseases | Negative |

Post-thaw Viability and Yield

| | |
|-----------|-------------|
| Viability | 97 % |
| Yield | 5.0 million |

Characterization: Hepatocytes were thawed using 37°C UCRM™ and centrifuged for 5 minutes at 50g. After removing the supernatant, hepatocytes were re-suspended in HQM™ and counted for viability and yield using the Trypan Blue exclusion method.

Drug Metabolism Activity

| Drug Metabolizing Enzyme | Substrate (μM) | Incubation Time (minutes) | Metabolite Quantified | Activity (pmol/minute/million cells) |
|--------------------------|-------------------------|---------------------------|-------------------------------|--------------------------------------|
| ECOD | 7-Ethoxycoumarin (100) | 30 | 7-Hydroxycoumarin | 245.13 ± 9.41 |
| UGT | 7-Hydroxycoumarin (100) | 30 | 7-Hydroxycoumarin glucuronide | 509.82 ± 13.96 |
| Sulfotransferase | 7-Hydroxycoumarin (100) | 30 | 7-Hydroxycoumarin sulfate | 22.36 ± 1.37 |

CYP450 Activity Assessment: The hepatocytes were incubated at a cell density of 0.5 million cells/mL in a 12-well plate (500,000 hepatocytes/well) for the designated time durations with isoform-selective substrates. The metabolites were identified and analyzed using LC-MS/MS.

IVAL cell culture media and tissue culture plates used in this evaluation:

- Recovery of thawed hepatocytes - Cat. No. 81015 - UCRM™ Universal Cryopreservation Recovery Media, 50 mL tube
- Suspension and incubation of hepatocytes - Cat. No. 81039/81040 - HQM™ Hepatocyte Incubation Media, 50 mL tube/500 mL bottle
